REGISTRY

Its an annotation on the container

```
registry = request.container_settings
registry.register_interface(IMySchema)
registry._p_register()
registry.for_interface(IMySchema)['field'] |= 'myinfo'
```

ASYNC UTILITIES

1. registered on load with configuration
2. async initialization / finalization
3. code invocation

```
- provides: guillotina_cms.interfaces.IWorkflowUtility
  factory: guillotina_cms.utilities.workflow.WorkflowUtility
  settings: {}
```
